LAPTOP

Built by professionals,
for professionals.

The Calybrate Origin

We didn't build CALYBRATE because the world needed another software tool; we built it because HR leaders needed their time back. After decades in organizational development and leadership consulting, we saw a recurring failure: brilliant people trapped in fake complexity wrestling with fragmented data, manual spreadsheets, and rigid platforms that required a tech degree to operate.

Our Philosophy

We believe that organizational health shouldn't be a logistics project. Calibration should be intuitive, holistic, and, above all, accessible. We've distilled enterprise-level psychology and performance metrics into a single, plug-and-play ecosystem. We've removed the friction so you can focus on the only thing that truly moves the needle: the human element.

The Calybrate Standard

Every module—from our self-assessments to our organization-wide culture pulses—is engineered with a Zero-Consultant mindset. This is your platform, your data, and your transformation. We just provided the engine.

A Seamless User Experience

Full Self-Service
Set up in minutes without IT support or consultants

Fortified Security
Enterprise-grade encryption and compliance built-in

Reclaimed Time
Save hundreds of hours with automated workflows

Real-Time Data
Instant insights that adapt as your organization evolves

Self-Service Deployment
Deploy in days, not quarters—no technical expertise needed

Instant Mobilization
Activate your entire team with one-click onboarding

Core Solutions

CalybrateMe©

A comprehensive personality assessment designed to decode internal drivers and work styles. By mapping individual temperaments, organizations can align natural talent with specific role requirements to ensure long-term cultural fit.

Map individual drivers to organizational purpose for perfect role alignment.

Calybrate180©

A structured, two-way calibration between leadership and execution. This module eliminates the bias of traditional top-down reviews, establishing a transparent, documented feedback loop that ensures managers and reports stay synchronized.

Bridge the gap between leadership and execution with transparent feedback.

Calybrate360©

A holistic evaluation that aggregates feedback from peers, supervisors, and subordinates. By benchmarking leadership behavior against the collective experience of the team, it provides an objective roadmap for executive growth.

Gain total professional perspective through multi-dimensional insights.

CalybrateCulture©

A high-resolution lens into the organizational infrastructure. This quantitative assessment tracks psychological safety, sentiment, and alignment trends across every department to identify hidden friction before it impacts retention.

Measure what truly matters and build a resilient, high-performance culture.

CalybratePerformance©

COMING SOON

The final layer of the architecture. This module synthesizes all assessment data into a singular workspace to automate performance reviews and create data-backed professional development roadmaps & goal tracking.

Automate performance reviews and track professional development goals.

Calybrate Suite

The ultimate architectural solution for organizations committed to total alignment. The Calybrate Suite integrates all five modules into a single, seamless intelligence layer. By connecting individual personality data, vertical 180 feedback, multi-dimensional 360 insights, and systemic culture analytics, leadership gains a 360-degree view of the organization's health and performance trajectory. This is the complete framework for high-performance scaling.

- Unified Executive Dashboard
- AI-Powered Predictive Analytics
- Fully Custom Automated Reporting

LAPTOP

How It Works

Our proven methodology ensures you go from raw data to strategic clarity in record time.

01

Establish the Data Foundation

Upload your organizational hierarchy and define your calibration goals. The system automatically configures the workspace to match your specific reporting lines and departments.

02

Frictionless Data Collection

Deployment is handled entirely by the Calybrate engine. Your workforce receives secure access links to their modules. No "learning curve" or training required.

03

Instant Strategic Clarity

Once the initial cycle is complete, the platform generates your first suite of reports. Move directly from raw data to the Organizational Master Map.

MOBILE

Solutions | Autonomy by Design + Fortified Integrity

CURRENT

LAPTOP

Autonomy by Design

We built this for the HR leader who doesn't have time for a consultant-led rollout. It is a plug-and-play ecosystem that puts control—and the data—entirely in your hands.

Fortified Integrity

Data security is our primary architectural constraint. Every calibration is governed by enterprise-grade encryption and strict anonymity protocols to protect your organizational "bones."

Create account | Errors to fix (your screenshots)

CURRENT

LAPTOP - Organization step, after pressing Enter

MOBILE - Account Details step

1. Wrong message: asks for a stronger password while the person is still on the Organization step
2. Pressing Enter here should move to step 2, exactly like CONTINUE
3. This checkbox currently decides whether Google / Microsoft can be used
4. Google and Microsoft buttons are locked until the box is ticked

Names, emails and the organization name are blurred in these screenshots.

1 Enter on the Organization step shows an error

PROBLEM

With the organization name filled in, pressing Enter (instead of clicking CONTINUE) shows the red message "Please create a stronger password." and stays on step 1.

LIKELY CAUSE

The two steps share one form, so Enter submits it and the final password check runs while step 1 is still showing. (Inferred from the behaviour; the app's code isn't in this project.)

FIX

In the submit handler: if the current step is 1, check only the organization name and move to step 2 (the same action as CONTINUE). Only step 2 runs the full validation and creates the account. Put the cursor in the Email field on step 2.

2 Show password rules before the error

PROBLEM

The error appears as a toast in the far top-right corner, away from the field, and does not say what "stronger" means.

FIX

Show the rules under the password field (length, number, symbol) and validate inline as the person types. Keep the toast only for server errors.

3 Google and Microsoft are locked until the box is ticked

PROBLEM

On step 2 the Google and Microsoft buttons cannot be used until the Privacy Policy / Terms checkbox is ticked, so people think social sign-up is broken.

FIX

Keep the checkbox only for the email-and-password route. Leave Google and Microsoft always active and add one line under them: "By continuing with Google or Microsoft you agree to our Privacy Policy and Terms & Conditions." Record the acceptance date when the account is created, for both routes.

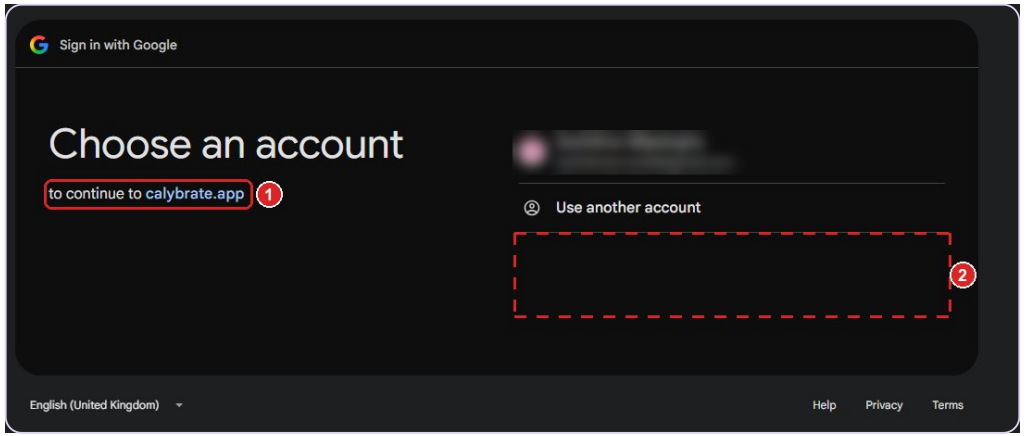

ALSO CHECK

The organization name from step 1 must survive the trip to Google or Microsoft and back, so it is not lost after sign-in.

Google sign-in | Consent screen

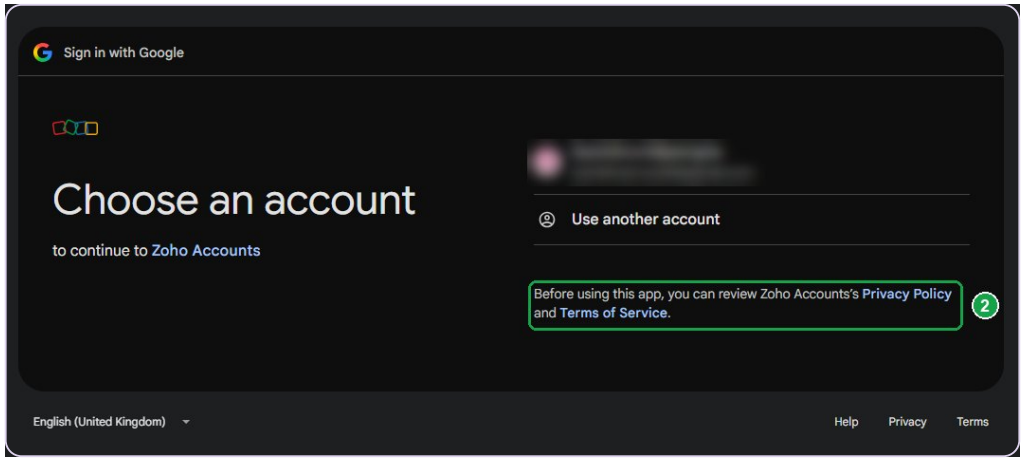

SUGGESTED

CURRENT - Calybrate

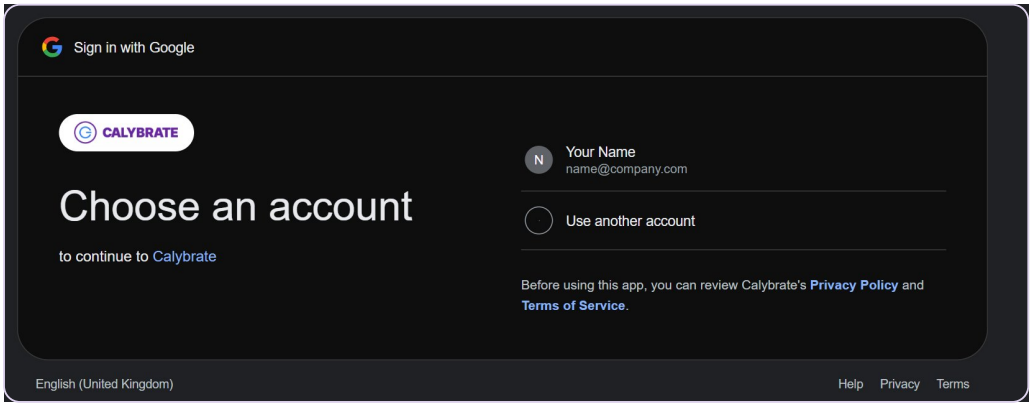

1. Shows the domain, not the app name
2. No Privacy Policy / Terms of Service line

REFERENCE - another app that shows its policy links

2. This is the line Calybrate should also show

SUGGESTED - Calybrate with Privacy Policy and Terms of Service

The new sentence is Google's own wording, filled in from your Privacy Policy and Terms links. Name and email in this mockup are placeholders.

Today the screen only says "to continue to calybrate.app" and has no logo or policy links. The next page lists the settings that produce the suggested screen.

Google (Google Cloud Console)

1. Open Google Auth Platform (older name: APIs & Services, OAuth consent screen) for the project that holds the Calybrate sign-in.
2. Branding: set the App name to "Calybrate". This replaces "calybrate.app" in "to continue to ...".
3. Branding: fill Application home page, Application privacy policy link and Application terms of service link with public pages on your main domain, for example https://calybrate.app/privacy-policy and https://calybrate.app/terms.
4. Branding: add calybrate.app under Authorized domains. The policy and terms pages must open without signing in.
5. Optional: upload the Calybrate logo. Google can ask for brand verification before a logo is shown to everyone.
6. Save, then check the account chooser again in a private window. If the app is still in Testing, publish it to production so every user sees the same screen.

Microsoft (Azure app registration)

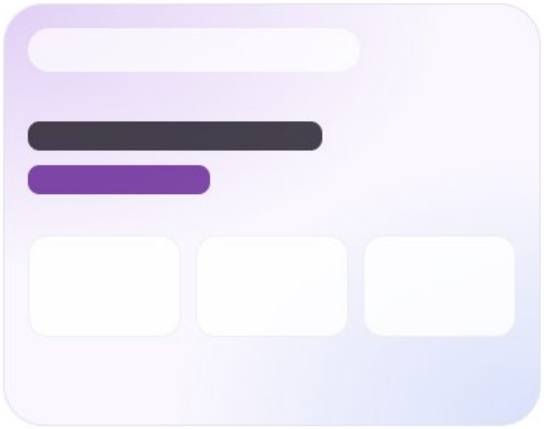

1. Branding & properties: set the app name to "Calybrate", plus the Privacy statement URL and Terms of service URL (same public pages).
2. Verify the publisher domain, so the consent screen does not show "unverified".

These are the usual steps; menu names can differ slightly between versions of the consoles. I have not changed any Google or Microsoft settings.
